Thermo TK:

Get better and free of pain faster

- Relieves from pain immediately and permanently
- Accelerates the healing process and shortens recovery time
- The treatment is pleasant, with no side effects and can be repeated as often as needed.

Depth Heating

Naturally painless.

Takes the pain away and activates self-healing

**The efficient therapy from competitive sports -
Now also available here**

Deep Heating through high-frequency electrotherapy in combination with a manual therapy – this makes fit in no time not only elite athletes after musculoskeletal injuries. During the treatment you feel nothing but a pleasant feeling of warmth. The immediate and beneficial effect convinces right at the first application!

During the application of Thermo TK a high-frequency current is applied, almost not perceptible for the patient. By this innovative technique the energy is released only in deeper tissue layers and converted into heat. Precisely at acute areas in muscles, tendons, bones and joints.

When is the treatment appropriate?

In all acute and chronic conditions of the support and movement apparatus, e.g.

- Muscle and joint pain,
- Pain in neck and back areas,
- Arthrosis at shoulders, hips, knees, hands, ...
- Tennis elbow or golfer's elbow,
- Tendinitis,
- Carpal Tunnel Syndrome

How does high-frequency depth warmth work?

Depth Heating with Thermo TK mobilizes the natural healing processes: Your blood circulation as well as oxygen supply improves, muscle relax sustainably, pain is significantly alleviated. The path to a more active life!

Is the treatment safe and well tolerated?

High-frequency current penetrates superficial skin layers without energy loss. The skin therefore does not heat up, this excludes skin irritations. In order to obtain rapid recovery, the application can be repeated even several times a day.

Is the treatment unpleasant?

Not at all, quite the contrary. Unlike with many conventional treatments, the high-frequency current is not applied by direct contact. It enters the tissue in the form of electromagnetic energy and is only converted into heat in the deeper layers. You feel nothing but pleasant warmth. Exactly where the pain is.
